REGION 6 CLP QA REVIEW**

CASE 43795 SDG MF2B33 SITE Falcon Refinery LAB MITKEM

COMMENTS: This SDG consisted of 15 sediment samples for total metals (by ICP-MS and ICP-AES) and mercury analyses following SOW ISM01.3. The sampler designated samples MF2B36 and MF2B60 for laboratory QC analyses. After contacting SMO, the laboratory performed QC analyses on sample MF2B36.

The SOW requires that the sediment sample results be adjusted for moisture content, which raised the adjusted QLs above the CRQLs specified in the SOW. The adjusted CRQLs were reported by the laboratory and are referred to as SQLs in this report.

All samples for ICP-MS were analyzed at 5X dilution only. The laboratory managed to meet the CRQL requirement by lowering the concentration for the low initial calibration standard to 1/5 the CRQLs specified in the SOW. Additionally, the laboratory diluted 2X and reanalyzed sample MF2B27 because of high calcium and iron concentrations in this sample for the ICP-AES analysis and because IS 45Sc had a high %RI for the ICP-MS analysis. The ICP-MS reanalysis at the 2X dilution had an acceptable %RI for IS 45Sc, so the results associated with this IS were reported by the laboratory for sample MF2B27.

Sample MF2B27 had a >70% moisture (73.2%), which does not conform to the EPA Office of Water definition of a soil. As a result, all results for sample MF2B27 were flagged with "W" on the DST and should be used with caution.

S3VEM Review was performed for this package as requested by the Region. For this review option, laboratory contractual compliance and technical usability of the sample results are primarily determined by the EDM CCS Defect Report and NFG Data Review Results Report, respectively. The reviewer performs supplemental hardcopy forms checking and applies Region 6 guidelines, where necessary, to account for known limitations of the electronic review process. Therefore, the reviewer's final assessments may deviate from those found in the EDM reports. The NFG Data Review Results Report for the SDG is attached to this report as an addendum for additional information.

OVERALL ASSESSMENT: Some results were qualified for all samples because of problems with a matrix spike recovery and serial dilution differences. ESAT's final data qualifiers in the DST indicate the technical usability of all reported sample results. An Evidence Audit was conducted for the CSF, and the audit results were reported on the Evidence Inventory Checklist. The DST included in this report is the final version.

INORGANIC DATA QUALIFIER DEFINITIONS

The following definitions provide brief explanations of the ESAT-Region 6 qualifiers assigned to results in the Data Summary Table.

- U** Not detected at reported quantitation limit.
- L** Reported concentration is between the MDL and the CRQL.
- J** Result is estimated because of outlying quality control parameters such as matrix spike, serial dilution, etc., or the result is below the CRQL.
- R** Result is unusable.
- F** A possibility of a false negative exists.
- UC** Reported concentration should be used as a raised quantitation limit because of blank effects and/or laboratory or field contamination.
- +** High biased. Actual concentration may be lower than the concentration reported.
- Low biased. Actual concentration may be higher than the concentration reported.
- W** The result should be used with caution. The result was reported on a dry weight basis although the sample did not conform to the EPA Office of Water definition of a soil sample because of its high water content (>70% moisture).
